

We Build Software That Moves Businesses Forward.

From Code to Crew, We Build for You.

Custom software, web platforms, mobile applications, AI solutions, and dedicated engineering teams for ambitious businesses.

SCALEVIUM

Technology Built Around Your Business.

Scalevium is a high-end software development and IT staff augmentation partner. We help founders and operators turn product ideas into reliable digital systems — custom web and mobile applications, AI-powered workflows, and dedicated engineers who work as an extension of your team. You get clear communication, production-ready delivery, and software shaped around real business outcomes — not technical jargon.

HOW WE PARTNER

01

Custom Product Development

End-to-end builds from discovery through launch — one team accountable for the product your customers use.

02

Web & Mobile Applications

Customer-facing apps and internal tools designed for clarity, speed, and day-to-day operations.

03

AI & Automation

Practical AI that supports booking, intake, support, and operations — integrated with the tools you already run.

04

Dedicated Engineering Teams

Senior developers embedded with your team — same standards, your roadmap, flexible engagement.

Our focus: Software that simplifies operations, connects customers and staff, and scales with your business — explained in plain language, built with enterprise discipline.

WHAT WE DO

Full-stack capability for ambitious products.

Product Development

From an initial idea to a production-ready digital product your team can operate and grow.

Web Applications

Modern web platforms for customers, partners, and internal teams — fast, secure, and easy to use.

Mobile Applications

Native-quality mobile experiences for field teams, consumers, and on-the-go workflows.

AI & Automation

Voice agents, intelligent intake, and workflow automation tied to your existing systems.

Backend & API Development

Reliable data layers, integrations, and APIs that keep your product consistent as you scale.

UI/UX & Frontend

Interfaces that feel premium and intuitive — so users understand the product immediately.

Cloud & DevOps

Deployment, monitoring, and release practices built for uptime and predictable launches.

Dedicated Development Teams

Add experienced engineers without the overhead of traditional hiring — project or long-term.

HOSPITALITY & GUEST EXPERIENCE

ExperiHAUS

A modern hospitality platform connecting in-room guest experiences with staff operations — one system for digital guest services and property management.

**Guest & staff experiences**

Digital hospitality layer for properties — guest-facing experiences and tools staff use to manage content and operations.

THE CHALLENGE

- Properties needed a unified way to deliver digital guest services beyond a basic TV menu.
- Guest and staff workflows had to stay separate — with clear access boundaries.
- One backend had to power multiple client surfaces without duplicating work.

WHAT WE BUILT

- A shared platform backend serving guest in-room experiences and a staff admin dashboard.
- Modular structure so property content and services can grow over time.
- Secure session handling for guest vs. staff users on the same system.

OUR ROLE

Product development Backend architecture Admin dashboard
Smart TV client API design

KEY FEATURES

In-Room Guest App

Smart TV experiences that present property services and content to guests in a polished, on-brand interface.

Staff Admin Dashboard

Central place for property teams to manage what guests see and keep experiences up to date.

Unified Backend

One API layer powering multiple clients — less duplication, consistent data across touchpoints.

Access Control

Guest and staff sessions isolated with appropriate permissions for each audience.

Modular Services

Structured routing so new property features can be added without rebuilding the core.

Production Ready

Built for real properties and daily operations — not a prototype confined to a demo environment.

TECHNOLOGY

NestJS

TypeScript

React

Smart TV

REST APIs

IMPACT

Centralized hospitality digital layer for guest-facing and staff-facing workflows · Reduced fragmentation between in-room experience and back-office tools · Foundation to extend property services on one platform.

TRANSPORTATION & RENTALS

Caribo

A multi-vendor vehicle and boat rental platform — connecting travelers, rental vendors, fleet inventory, and administrators in one booking ecosystem.

**Marketplace & vendor operations**

Customers discover rentals while vendors manage listings, availability, and orders from dedicated dashboards.

THE CHALLENGE

- Multiple vendors needed to list vehicles and boats without sharing each other's operational data.
- Customers expected a simple discovery-to-booking flow across different rental types.
- Admins required oversight of vendors, bookings, extensions, and platform rules.

WHAT WE BUILT

- Customer-facing rental discovery and booking journeys for vehicles and boats.
- Vendor dashboards to manage inventory, pricing, availability, and orders.
- Admin tools for platform governance, booking oversight, and workflow control.
- Extension and order workflows so rentals can be managed after initial booking.

Multi-Vendor Listings

Each vendor operates their catalog while customers see one cohesive marketplace.

Booking Management

Reservations, status updates, and rental timelines handled in one system.

Vendor Dashboard

Day-to-day tools for fleet owners to run rentals without spreadsheet workarounds.

Admin Oversight

Platform-level visibility into vendors, bookings, and operational exceptions.

Extensions & Orders

Support for changes after booking — extensions and order flows stay traceable.

Customer Experience

Clear paths from search to confirmed rental across device types.

OUR ROLE

Full-stack product development

Marketplace UX

Vendor & admin dashboards

Booking workflows

API integrations

TECHNOLOGY

React / Next.js

Node.js

PostgreSQL

REST APIs

AWS

Impact: Connected customers, vendors, and administrators on one rental platform · Centralized booking and extension workflows · Scalable multi-vendor operations without manual coordination.

TRANSPORTATION & FIELD OPERATIONS

TowCentric

A towing and roadside assistance platform that turns hardware alerts and field events into live dispatch work — so teams respond faster with full situational awareness.

Live dispatch dashboard

Real-time view of tickets and fleet activity — dispatchers see updates as events arrive, without refreshing the screen.

THE CHALLENGE

- License-plate and hardware alerts needed to become actionable dispatch tickets automatically.
- Dispatchers could not rely on manual data entry during high-volume periods.
- Operations required live visibility — not batch updates or delayed reports.

WHAT WE BUILT

- Backend ingestion that converts hardware webhook events into structured dispatch tickets.
- Real-time dashboards powered by WebSocket updates for dispatch teams.
- Workflow-oriented UI so operators track ticket state from alert to resolution.

OUR ROLE

Backend development

Real-time dashboards

Webhook integration

Frontend development

Hardware Ingestion

Automated alerts from field hardware flow directly into the dispatch queue.

Dispatch Tickets

Structured tickets replace ad-hoc notes — each event is trackable.

Live Dashboards

WebSocket-driven UI keeps dispatch and management views current.

Operational Workflow

Designed around how towing and roadside teams actually work under pressure.

TECHNOLOGY

Node.js / Express

React

WebSockets

Real-time APIs

Impact: Automated path from hardware alert to dispatch ticket · Live operational visibility for dispatch teams · Reduced manual steps during event intake.

ALSO IN OUR PORTFOLIO

DealsCracker, ActiveSOS, and Smart Parking — selected highlights on the following pages.

E-COMMERCE & DISCOVERY

DealsCracker

A smart deals discovery and comparison platform — helping shoppers find offers, compare products, and save items they care about.

**Discovery & comparison**

Browse deals by brand, compare options side by side, and keep shortlists for later decisions.

THE CHALLENGE

- Shoppers struggled to compare offers scattered across brands and categories.
- The product needed fast search and clear product pages without overwhelming users.
- Wishlist and deal surfaces had to encourage return visits without clutter.

WHAT WE BUILT

- Product discovery flows with brand pages and structured deal presentation.
- Comparison experiences so users evaluate options in one place.
- Wishlist and search to support research-heavy purchase decisions.

SAFETY & FAMILY TECHNOLOGY

ActiveSOS

A child safety and tracing platform — mobile tools for families and dashboards for organizations that need visibility and coordinated response.

**Mobile & organization views**

Family-facing mobile experience alongside organization dashboards for monitoring and administration.

THE CHALLENGE

- Families needed a straightforward mobile experience for safety-related workflows.
- Organizations required admin views without exposing sensitive data inappropriately.
- Tracking-related interfaces had to be clear under stress — simple, not technical.

WHAT WE BUILT

- Mobile application focused on the end-user (parent/guardian) perspective.
- Admin and organization dashboards for operational oversight.
- Structured flows for tracing and safety features with role-appropriate access.

OPERATIONS & MOBILITY

Smart Parking

A smart parking management solution — simplifying how operators monitor spaces, manage bookings, and run day-to-day parking workflows.

The dashboard mockup features a top navigation bar with a blue button. The main content area is divided into two columns. The left column contains three stacked colored rectangles (green, orange, and pink) under a black header bar. The right column contains a light blue box with four smaller colored rectangles (three blue and one grey) under a black header bar, and three horizontal white input fields below it.

Operations dashboard

At-a-glance occupancy and booking management for parking operators.

MORE OF OUR WORK

**FleetQuix**

Multi-tenant transportation management for carriers — isolated workspaces and role-based access.

[Logistics](#) · [TypeScript](#) · [React](#) · [MongoDB](#)

**Earthquakealert**

Real-time disaster map unifying road closures and outage data with mobile field reporting.

[Emergency / GIS](#) · [React Native](#) · [Leaflet](#)

**StackOne**

Universal integration layer for HRIS, ATS, LMS, and CRM — Scalevium contributed integration & webhook engineering.

HOW WE WORK

Our development process.

01**Discover**

Understand the business, users, and requirements.

02**Design**

Plan experience, flows, and product structure.

03**Build**

Develop core product functionality in iterations.

04**Integrate**

Connect payments, APIs, and third-party systems.

05**Test**

Validate usability, reliability, and edge cases.

06**Launch**

Deploy, monitor, and support production.

Every phase is communicated in business terms — you always know what is being built, why it matters, and what comes next.

PARTNERSHIP

Why teams choose Scalevium.

Business First

We understand the problem before writing code — outcomes drive every technical decision.

Full-Stack Capability

From customer interface to backend infrastructure, integrations, and cloud deployment.

Production Mindset

Software built for real users, real operations, and long-term maintainability.

Flexible Engagement

Project-based delivery or dedicated engineers embedded with your team.

Clear Communication

Technical complexity translated into plain updates executives and founders can act on.

Long-Term Partnership

We can continue building, improving, and maintaining the product after launch.

SCALE YOUR TEAM

Extend your team without extending your headcount.

Add experienced engineers to your existing team without the overhead of traditional hiring — same standards, your roadmap, flexible scale up or down.

DevOps Engineers

ENGAGEMENT MODELS

Dedicated Developer

One senior engineer embedded with your team — ideal for focused roadmap items or skill gaps.

Dedicated Team

A balanced squad (frontend, backend, QA) owning a product stream under your leadership.

Project-Based Team

A scoped team assembled for a defined release — discovery through launch with clear milestones.

Have a Product in Mind? Let's Build.

Tell us what you are building. We will recommend product development, staff augmentation, or a dedicated team — and respond with a clear next step.
